Bridge between Swiss resources and Ukraine's reconstruction

SRP | SUPPORT & RECOVERY PLATFORM

SRP | SUPPORT & RECOVERY PLATFORM

A Second Life for Swiss Infrastructure in Ukraine

SRP | SUPPORT & RECOVERY PLATFORM

What We Do

The SRP - Support + Recovery Platform – is a matching platform.

It connects Swiss cities, municipalities, companies, and organizations with Ukrainian communities.

The goal is to transfer well-maintained equipment, vehicles, and infrastructure from Switzerland to locations where they are urgently needed.

This is done via the digital SRP platform: simply, transparently, efficiently, and with tangible impact.

Supported by SECO, most Swiss cantons and major cities

Why This Matters

Many Ukrainian cities and municipalities face major challenges in maintaining essential public services.

Particularly affected are:

- Energy supply
- Water supply
- Public transport
- Healthcare and emergency services

Needs include decentralized energy systems, transformers and grid components, medical equipment, water treatment systems, and vehicles for public and municipal use.

At the same time, fully functional equipment in Switzerland is regularly replaced, even though it remains operational.

How the Platform Works

The SRP provides a reliable framework to systematically match supply and demand for aid resources.

Core functions of the platform include:

1. Identifying priority needs of Ukrainian cities and municipalities
2. Registering available offers from Switzerland
3. Assessing technical and operational compatibility /feasibility
4. Coordinating the overall process

Operational implementation is carried out in collaboration with experienced partner organizations in Switzerland and Ukraine. They ensure transport, handover, and commissioning.

A non-profit association is in charge of the platform. The development and operation of the platform are financially supported by the Swiss Confederation, as well as numerous Swiss cantons and cities.

Who Can Participate

Swiss cities, municipalities, companies, and organizations that have functional equipment, such as devices, vehicles, or installations, can register these items on the platform for donation.

In particular, stakeholders from the following sectors are addressed:

- energy supply
- water supply
- public transport
- healthcare and emergency services
